

Modrus Virtual Office

Modrus Virtual Office (MVO) provides a centrally hosted working environment for businesses with geographically dispersed users or where data security and disaster recovery are key. Customers focus on their revenue generating activities safe in the knowledge that their technology needs are understood and delivered to a level that could not be achieved cost effectively with in-house skills.

Concrete business benefits

MVO presents fast, reliable access to business applications for all of your staff, no matter where they are based. In addition, it increases productivity and fee earning potential by almost completely eliminating time wastage due to IT downtime and allows you to remain focused on your business plan – not on your IT.

Clearly defined total cost of ownership

MVO is a fixed fee, fully managed solution based on the number of users in your organisation, and provides the benefits and security of data centre hosting to multiple offices, clients, suppliers and home workers. Modrus Virtual Office replaces high installation, swap out and unexpected break-fix charges with flat, predefined, budgetary expenditure.

Inherent disaster recovery

MVO is hosted between two of the UK's primary data centres; the same buildings used by many of FTSE's top 100 companies. This provides the security, redundancy of power, fire suppression and environmental controls that, coupled with Modrus' state of the art virtualisation and data storage technologies provides unrivalled levels of stability and availability, meaning users will be back up and running in hours not days if the worst happens.

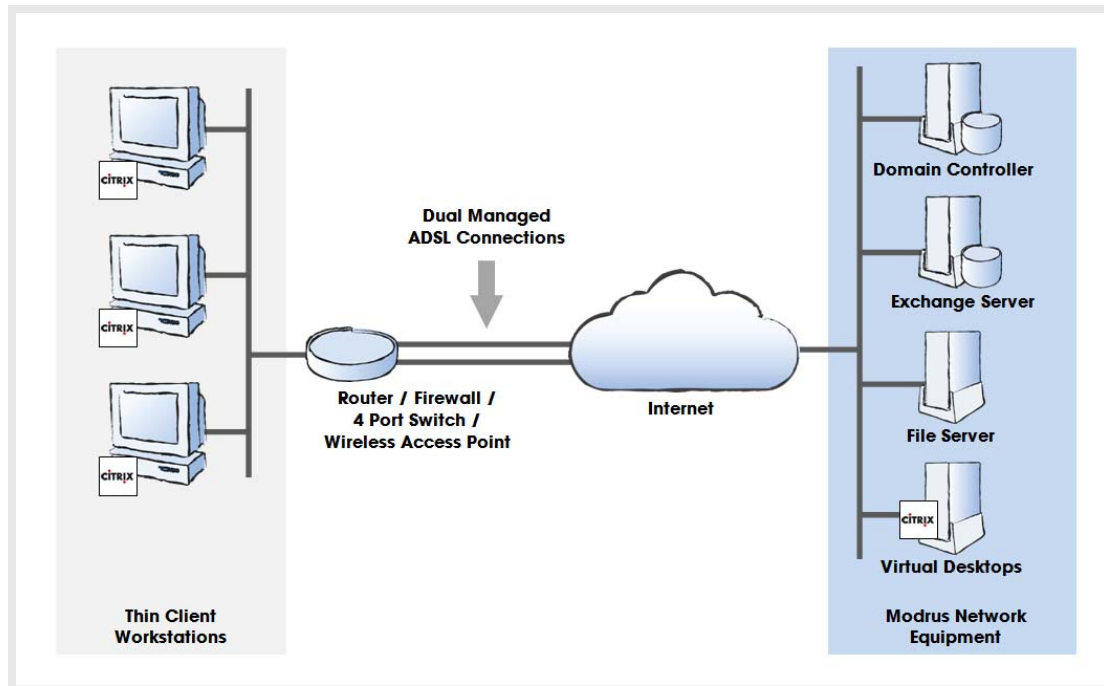

Better resilience & security

MVO removes the single point of failure that a head office server room infrastructure creates, while still securing sensitive data at a central location for easier control.

Unbeatable System Uptime Guarantee

Modrus supplies all of the required system hardware and proactively monitors everything 24/7 from its sophisticated operations centre. On many occasions this means that if an issue occurs, it is rectified before you are even aware of it. Modrus is extremely confident of the processes in place and offers a cast-iron uptime guarantee. If your system is down, you don't pay for it – it's as simple as that.

Modrus Virtual Office

Modrus Virtual Office provides:

- Centrally hosted, data centre environment
- Full nightly replication of applications & data to secondary data centre
- Hosted desktop applications (including Microsoft Office, messaging, document viewers)
