

Modrus Hosted Backup

Modrus Hosted Backup is an automated online backup and recovery service that provides secure, reliable, efficient protection of your organisation's critical data, directly through the Internet. With Modrus Hosted Backup, you get a world-class data protection infrastructure that lets you safeguard your data without additional capital or IT expenses.

Flexible Protection

Modrus Hosted Backup automatically backs up desktop, laptop and server data from across your organisation. You configure your desired retention schedule and monitor your backups via a web browser. Your data is de-duplicated, compressed, encrypted and then transmitted to a vault in one of our top-tier data centres. Your data is right at your fingertips whenever you need it – with multiple options for fast, foolproof recovery.

Comprehensive Solution

Modrus Hosted Backup centralises the backup and recovery of data on all computers distributed throughout your organisation – headquarters, branch offices and even laptops. Our client software automatically backs up your data over the Internet to a highly secure data centre. You monitor and manage everything within a web browser. Recovery is just as easy and online reports provide details about the status of your backups.

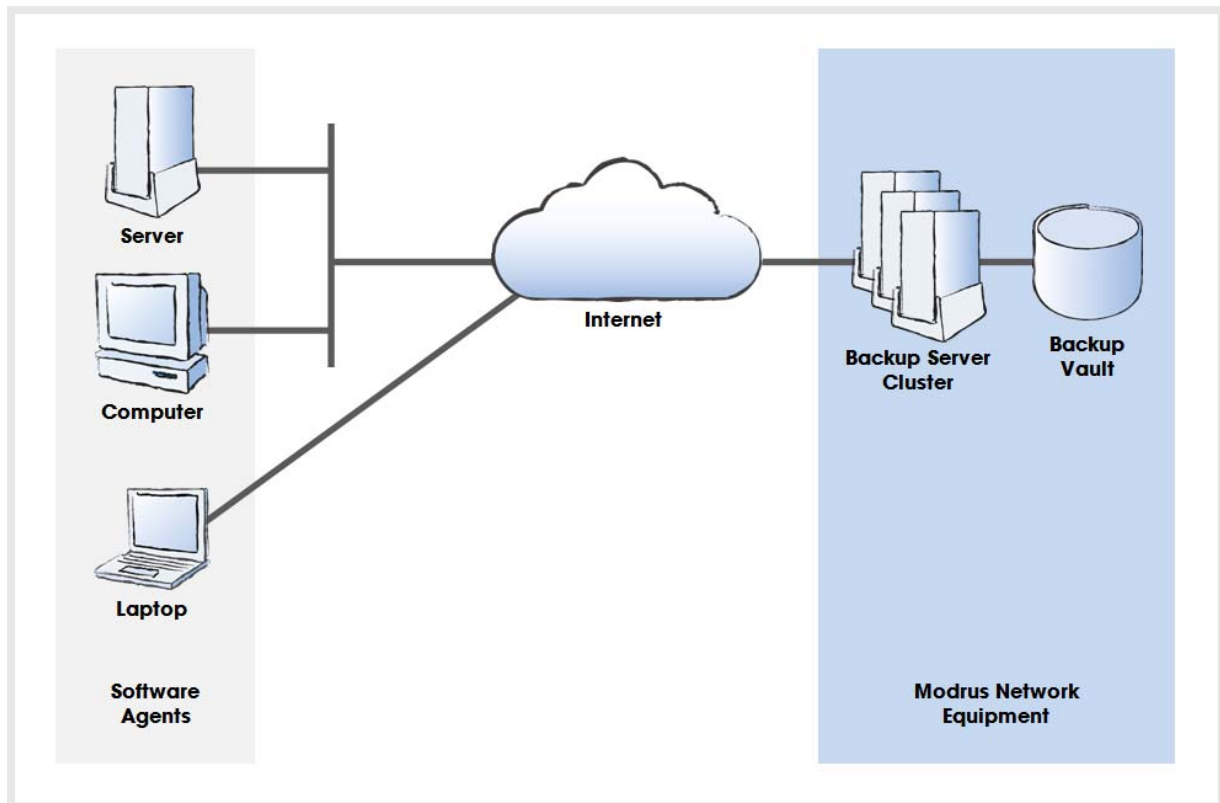

Minimised Storage Requirements & Reduced Network Impact

Front end data de-duplication ensures that only new and changed blocks of data within files are sent to storage, decreasing backup times and reducing storage footprints. Back end data de-duplication streamlines storage by eliminating redundant blocks of data within backup jobs, further decreasing storage footprints without compromising performance or scalability. Compression technology and bandwidth throttling maximise backup transfer speed and reduce impact on productivity.

Powerful Features:

- **Hot backup** – 24/7 operations backing up mission-critical applications while they are online.
- **Application support** – backup live Exchange, SQL Server and SharePoint data.
- **Flexible retention policies** – satisfy internal and external regulatory requirements.

Modrus Hosted Backup

Client software automatically backs up your data over the Internet to a highly secure data centre. Data de-duplication ensures that only new and changed blocks of data within files are sent to storage, decreasing backup times and reducing storage footprints.
